INFINITE RANGE - OFFSET CENTRE ACCESS SLIDER
OFFSET CURVED SLIDING ENCLOSURE CENTRE ACCESS

Please read these instructions before installing, as incorrect fitting will invalidate the guarantee-carry out each stage before moving onto the next. **Do not dispose of packaging**
, no claims for damaged or missing parts will be accepted if packaging has been disposed of.

**IMPORTANT SAFETY NOTICE**
The glass supplied with this enclosure is toughened safety glass in accordance with British Safety Standards. Care should be exercised when handling the glass to avoid knocking or bumping the glass, particularly the edges and corners of the glass as this could cause the glass to shatter into small fragments. It is essential to protect the glass by resting it on a soft protective surface during installation such as cardboard or carpeting.

**KEY STAGES TO INSTALLATION**

1. Check package contents
2. Install wall frames vertical and plumb.
3. Fit fixed glass side panels
4. Fit Head and Bottom rails
5. Adjust, plumb, level then tighten clamps
6. Fit door glass into rails
7. Fit the handles
8. Fit the door seals
9. Fit wall profile covers
10. Remove protective film from wall profile covers
11. Fit seals between glass and wall profiles
12. Silicone seal the unit

**TOOLS REQUIRED**

- Flat-headed screwdriver - medium
- Pozi-drive screwdriver - medium
- Spirit level
- Tape measure
- Silicone sealant - clear
- Electric drill
- 7mm masonry drill
- 3mm allen keys (supplied)
- Pencil
- Screw wizard tool (supplied)

Use this useful screw wizard tool to insert screws through wall profiles into wall and start first one or two turns then use your conventional screw driver.

**IMPORTANT**

- Check appearance of shower enclosure. Any defects must be reported to Kudos Shower Products before assembly / installation.
- Claims for imperfections will only be accepted prior to assembly / installation.
- Ensure shower tray is level in all directions.
- Prior to installation, any gap or crevice between the rim of the tray and wall must be filled with silicone sealant flush with the rim of the tray - see detail opp.
- Waterproof walls using ceramic tiles/shower panels etc., before installation.
- Fully seal between the tiles and the tray **BEFORE installing the enclosure**
- Check the enclosure adjustment sizes are suitable for your installation.
- Use care when drilling into walls to avoid hidden pipes or electrical cables.

**CLEANING**

**GENERAL** - for frame work and fixings use only warm soapy water and damp cloth/ sponge on a regular basis. After cleaning please rinse with clean water to remove any residue.

Do not use abrasive scouring powders, chemicals or aerosol cleaners - these may result in damage to the surfaces, in particular, the plated component parts. **See instruction below for glass cleaning advice.**

**LIFESHIELD**

Your Kudos Product is pre-treated with Life Shield on the inside surfaces only. While this makes cleaning the glass a lot easier and helps prevent the build up of harmful lime-scale and soap deposits the glass still needs to be maintained on a regular basis. We recommend the use of a detergent and aroma free glass cleaner (A 50/50 mix of White Vinegar and Water works well!!) Strong detergents and abrasives can damage the coating.

**DO NOT** use abrasive cleaners or abrasive scrubbing equipment for cleaning!!

**DO** use a squeegee to remove remaining droplets of water from glass after showering, any build up of residue can be removed easily using an appropriate cleaner and agitation from soft cleaning equipment.

**THESE INSTRUCTIONS TO BE LEFT WITH THE CUSTOMER**
1 CONTENTS, carefully check contents. It is advisable to keep contents in protective packing until required.

2 DECIDE WHICH CONFIGURATION YOU REQUIRE. The wall frames are different for the long side of the tray and the short side of the tray as can be seen in Fig. 1 and 2 below.

3 FITTING THE WALL FRAMES, Each wall frame is screwed to the wall with 3 No8x30 screws and wall plugs (provided). Position correct wall frame on tray 15mm from front face of tray (see Fig. 3). Using a spirit level ensure it is vertical (not leaning in or out of the opening). Mark the position of the 3 wall holes in wall frame. Remove wall holes in wall using 7mm masonry drill bit. Insert wall plugs provided (or fixings to suit the construction of your walls) screw wall frame into position. Then repeat this for the other wall frame.

4 BEFORE INSTALLING WALL PROFILES: Because it will be difficult to access after the door is installed, it is necessary to clip on the OUTSIDE wall profile covers BEFORE installing the wall profiles. Carefully remove two wall profile covers from the protective packing but DO NOT remove the protective film from the surface of the covers at this time. Clip on the covers to the faces of the wall profiles that will be on the outside of the unit as per the illustration in Fig. 4 and Fig. 5 below. EXERCISE CARE WHEN HANDLING THESE COVERS TO AVOID DAMAGE.

5 FITTING THE WALL PROFILES, Looking outward from inside of the enclosure, the left wall profile is identified by the green screw which should face the inside of the enclosure and be nearest to the top. Similarly the right wall profile shown here in Fig.6 is the one with the red screw which should face the inside of the enclosure and be nearest to the top.

---

**Fig. 1**

The wall profile TYPE 1 is fixed to the wall on the longer side of the tray and TYPE 2 on the short side of the tray as shown.

---

**Fig. 2**

The wall profile TYPE 1 is fixed to the wall on the longer side of the tray and TYPE 2 on the short side of the tray as shown.

---

**Fig. 3**

Before fitting wall frames take note that they should be set back from the vertical face of the tray by 15mm as in Fig. 3 below.

---

**Fig. 4**

Fit wall profile covers to outside only at this stage

---

**Fig. 5**

This is how the wall profiles will be fitted after fitting the outside wall profile covers now continue to stage 4.......

---

**Fig. 6**

When viewed from inside enclosure looking out.

Red screw = Right Profile (shown here)

Green screw = Left Profile

Check these caps are firmly in place before installing wall profiles as they ensure the fixing (adjustment) brackets are (up) in the correct position. They may be removed if and when adjustment (in to out) is necessary either after fitting wall profiles or in stage 15 of these instructions.

---

1000 x 810 CENTRE ACCESS SLIDING DOOR - Page 2
Each wall profile is screwed to the wall frame with 5xNo.8x16 screws (supplied). Position one wall profile on tray and align over the wall frame (see Fig.7). Fix two top screws and then two bottom screws. Next insert the centre screw into the round collar supplied with the screws and then insert this through the rectangular hole in the back of the wall profile and screw into the hole in the wall frame.

Use spirit level to check the wall profiles are vertical. If not, adjust using the lateral adjustment screws: (see “Guide to Adjustments” in stage 10 further in these instructions to identify the lateral adjustment screws)

PREPARING THE RAILS, The bottom rail has nylon height adjustment screws pre-fitted. These are the black nylon hexagonal headed screws that may be adjusted, if necessary, later on to ensure the rail is fully supported onto the tray see Fig. 9

Remove the m4 csk screws from the inside face of both rails at the ends (2 screws at one end and 1 screw at opposite end) this is where the glass will be clamped see Fig. 8 and keep these ready for use later on.

The top rail does not have the height adjustment screws.

If the height adjustment in stage 9 of these instructions, creates a gap under the bottom rail - this is the spanner (supplied) that you will use to adjust “rail support screws” downwards until they seat onto the tray for the rail to be fully supported on the tray.

FITTING GLASS PANELS, The fixed panels can now be fitted. Each panel is pre-fitted with a bottom gasket as shown in Fig. 10 below. Ensure when fitting these panels that the soft seal is facing inwards into the shower.

To install the first panel, slide the panel into the wall profile on the closing side, keeping the bottom edge of the panel just above the rail. Make sure glass is pushed up against the clear plastic part in the bottom rail. The bottom seal must rest on the tray with the soft flange facing inwards.

Next slide the second panel into the opposite side wall profile and then down into bottom rail as before. Also ensure the glass is pushed up against the clear plastic part. Then replace 2x m4 csk screws as per Step D above and tighten.

Now position the top rail onto the two glass panels ensuring the glass is fully inserted into the rail. Push each glass panel against the clear plastic part as before. Insert the remaining two m4 csk screws into the holes at each end of the rail and tighten both.
13 The two glass panels and the top and bottom rails now form a rigid unit that can be moved to the left or right. Ensure the unit is correctly positioned so that the gap between the end of the rails and the wall profiles is the same on both sides.

Slide glass panels and top and bottom rails as one unit to left or right to set gaps equally.

Place spirit level onto edge of each glass panel to check for vertical. If necessary push on glass to set in vertical position.

Now tighten the glass clamps in the wall profiles using a flat-headed screwdriver.

To identify the glass clamps in the wall profile see Fig. 17. The design makes it impossible to break the glass by over tightening because the screw heads will tighten against the wall profiles first. So do ensure these are fully tight.

9 LEVELLING THE UNIT. Place a spirit level onto the bottom rail and check if this is level. If not, use the height adjustment screws to level the unit by raising the relevant side. See the “Guide to Adjustments” below in stage 10. If it has been necessary to adjust the height to level the unit, the rail support screws may need to be adjusted downwards until the rail is fully supported on the tray - see Fig. 9 in stage 6 of these instructions.

10 Guide to adjustments shown on inner face of wall profile

The unit is designed to enable 3 dimensional adjustment during installation without removing any part of the unit already installed. The diagram here illustrates the adjustments possible and their location.

Fig. 20

Fig. 21

11 FITTING THE SLIDING DOOR. The sliding door has the four wheels pre-fitted. In order to insert the top wheels into the top track as shown in Fig. 19 - it will be necessary to loosen the two bottom wheels. The door can then be angled as shown and the two top wheels inserted into the track, then lower the door into position by guiding the two bottom wheels into the bottom track.

CHECK if the door is hanging vertical to the fixed side panels by comparing the glass edges to see they are parallel on the vertical edges. If not, the door can be adjusted by loosening one or both of the top wheels and moving door glass into correct position, then while holding the glass re-tighten the top wheels. Check again if door is now hanging correctly then re-tighten the bottom wheels, ensuring they are pushed upward in the bottom track. This will prevent the door from “jumping” out of the track inadvertently.

12 FITTING THE HANDLES. Remove the handles from the packaging and remove the top and bottom screws. Fit to glass in accordance with the detail Fig. 20. Ensure handle is vertical then tighten screws through glass and push in screw covers.

13 FITTING WEDGE GASKETS. Insert the seals as shown below, Fig. 21 - into the recess between the glass and the bottom rail on the inside at the ends of the fixed panels where they are clamped into the rail.

Press wedge gasket seal down until it seats firmly into the recess and locates aluminium bottom rail into the groove as indicated. If difficult to fit, wet the seal and glass with a little water.
**14 FITTING THE DOOR SEALS,**

Fit the seals shown in Fig. 22. On the overlap sides the long notched seal fits onto the sliding door glass and the shorter seal fits to the fixed panel as shown in Fig. 19, ensure gasket on the fixed panel is pushed firmly down onto the clear plastic part in the bottom rail. Fit the seals to the doors as in Fig. 24.

To make it easier to fit, run a wet cloth down the edge of the glass to which the seal is to be fitted.

**15 FINAL CHECK AND ADJUSTMENT,**

Open and close the sliding door and check that it runs smoothly. If not, check that the frame is vertical (in to out) and not twisted. If necessary the frame can be adjusted using the lateral adjustment screws see Fig. 17 in guide to adjustments stage 10

To Open

**16 FITTING THE INSIDE WALL PROFILE COVERS**

Care should be used when handling these covers, before they are fitted to the wall profiles. Engage the back edge of the wall profile cover over full height of the butterfly profile and then swivel the cover around to engage over the front of the wall profile and clip into position. NOTE ensure the narrow edge fully engages the butterfly profile over the FULL HEIGHT before swivelling the wider edge onto the front of the wall profile or the cover may not engage correctly.

**17 FITTING THE GLASS PANEL SEALS.**

FIRST Remove the plastic protective film from the wall profile covers at this time by peeling it away.

NEXT Fit the glass seals at junction of glass and wall profiles. Fit glass edge seals to both inner and outer faces of two fixed panels at junction of wall profiles and glass

NOTE: different seals on each side.
FIT THE TWO TOP CAPS to the wall frames then fit the two top caps to the wall profiles using the No.6 x 12 screws supplied.

FINALLY SEAL THE ENCLOSURE, Using a clear silicone sealant apply a thin bead to all the edges as shown. To achieve a neat finish it is recommended that each joint to be sealed is masked either side with masking tape so that only a maximum of 3mm either side of the joint is exposed. The masking tape should then be removed immediately after sealing (DO NOT allow silicone to dry over masking tape).

DO NOT USE OR DISTURB THE ENCLOSURE FOR 24 HOURS AFTER SEALING TO ALLOW THE SILICONE TO DRY.

NOTE: Do not seal to tray on the inside of the enclosure.

Run the sealant up both sides of the gaskets where they meet the wall profiles and bottom rail - do this on both fixed panels to the left and right of the door on the OUTSIDE only.

Seal over the full width wall to wall on the OUTSIDE only.

Seal to wall over full height on the OUTSIDE and INSIDE left and right of the unit.
